DUCALE Macchine da Caffè di Sandei Ugo & C. s.n.c.
Via Carra 5 - 43100 PARMA (PR) - Italy
Tel. +39.0521.272619 - Fax +39.0521.271480
E-mail: info@ducale.com <http://www.ducale.com>

Dimensions and Weight:

- 1830 mm x 655 mm x 620 mm
- 140 Kg

Capacity:

- 700 cups + stirrers/spoons
- 6 containers
- Up to six different soups

Features:

- 1 under pressure boiler
- Ducale Mixerless System ®
- Executive and/or MDB payment system
- Software programmable via USB

The exclusive Ducale Mixerless System is based on "an intelligent arm" which takes the cup under the chosen powder selected by the consumer.

City Soup 7 delivers a ready-to-drink soup in just a few seconds. It dispenses the suitable quantity of powder and the right quantity of hot water at the right temperature and pressure directly into the cup (no mixers are needed in this machine).

The soup is mixed inside the automatic vendor, then the intelligent arm delivers the soup into the delivery station. The inside of the machine is always separated from the outside.

The mixerless system raises the operator from the periodical expensive vendor sanitation (HACCP) and guarantees the end-consumer with a product which is hygienically safe.

The dosage of the ingredients is guaranteed by the automatic vendor software; the water, being dosed by an electronically controlled volumetric counter, is warmed up by a special boiler which, being under pressure, creates neither steam nor moisture inside the automatic vendor; the temperature inside the vendor is kept at a suitable constant level by a tangential fan.

According to the law, the "City Soup 7" conforms to DPR 24/06/1996 n° 459 and regulations relative to European Ordinances 89/392 CEE (for machinery), 89/336/CEE (EMC) and 73/23/CEE (DBT), regulations EN 50144 D.L. 277/91; the type of machine declared also conforms to D.L. 25/01/92 n° 108 and DPR 23/08/82 n° 777 based on guidelines outlined in EEC Ordinance 89/109 concerning materials and objects coming into contact with food products.
